NVDA \$195.89 spot

AGGRESSIVE CALL BUYING

Call flow is stacked right at and above spot on the **Jul 8 (1DTE)** expiry, and it built fast: the flagged strikes went **168k → 629k contracts** versus yesterday. The **\$195 call** did the heaviest lifting — **138.6k today vs 16.8k yesterday (+725%)**, 26× its 5-day average, against just 4.3k open interest, with IV bid up to ~60%. Someone is paying up for near-term upside.

TSLA \$403.64 spot

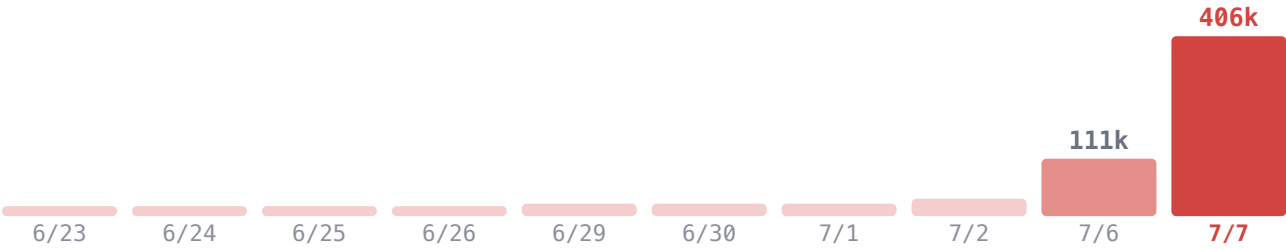

DOWNSIDE HEDGING / PUT FLOW

TSLA is two-sided but **put-skewed** on the **Jul 8 (1DTE)** expiry, and the jump is even sharper than NVDA's: flagged strikes went **111k → 406k contracts (+265%)**, nearly 25× the 5-session norm. The at-the-money **\$405** and **\$407.5 puts** are up **+552%** and **+470%** day-over-day, turning over 40–44× their open interest at ~60% IV — traders paying up for protection or a fast move lower right against spot.

You're receiving this because unusual-options-activity alerts are on for your Markets watchlist. Today's volume is the live intraday snapshot via Massive; **Yesterday** and the **5-day average** are prior settled sessions from the same contract's daily history. Chains are near-dated (1DTE), and open interest is the prior session's settled figure, so Vol/OI ratios run high by design — the day-over-day and vs-average multiples are the cleaner read on how unusual today really is.
